The Course

When a business has the energy required to operate, it is accountable for the prudent use of its power. Poor energy management can be the root for consuming a large portion of electrical energy. This course is specially designed to guide relevant personnel on how to manage electrical energy effective to achieve sustainable savings. We aim to help you make the most of your energy and the solution is in the 4 critical steps, which are,

1. Measure
2. Fix the basic
3. Automate
4. Monitor & control

Each of the steps will be analyzed in detailed during the training session.

The Course Objectives

At the end of the workshop, participants will be equipped to:

- Know the fundamental of energy management solutions
- Audit and analyze the total electrical energy consumption or generation
- Advise in developing and implementing measures to ensure efficient management of electrical energy at the installation
- Monitor effective implementation of the measures
