

HOW TO ANALYSE QUANTITATIVE DATA USING SPSS

PARTICIPATION FEES

RM100.00

06 MARCH 2012

8.30 a.m. - 4.30 p.m.

FE2 COMPUTER LAB, UUM CAS

SYNOPSIS

SPSS is a powerful statistical application package that is particularly useful for the analysis of questionnaire data. It can be used in the analysis of data from various disciplines. The workshop is designed to introduce the SPSS Windows programme, the preparation of data files and data screening. The basic concept of statistics, such as naming variables, measurement and type of data will also be discussed. Participants will also have hands-on experience on SPSS.

WORKSHOP GOAL

This workshop provides an introduction to quantitative data analysis techniques through using SPSS. This is a first level workshop, offered to develop basic SPSS skills in handling and analyzing quantitative data.

WORKSHOP CONTENT

- > conceptual understanding of SPSS
- > Entering the data
- > Data screening (assessing normality)
- > Data transformation (recording & computing)
